

# Dutch Sector Decommissioning Project

Starting before the 2018 Christmas period and running into Q1 2019, N-ERGISE was involved in the successful Decommissioning of NUI gas production platform located within the Dutch sector of the North Sea.

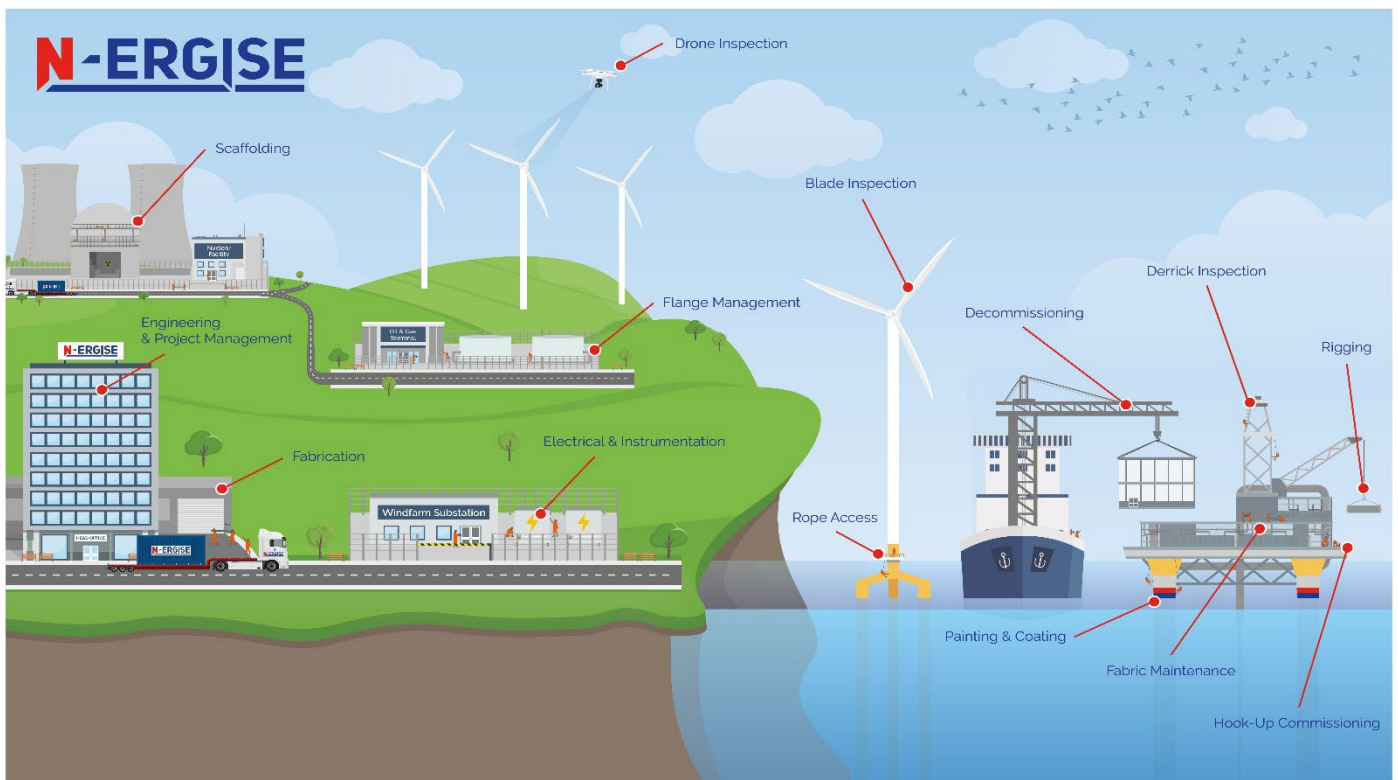

Many testing challenges were overcome on this project from harsh weather conditions, confined space working, SIMOPS and 24/7 working with day and night shifts. Despite the testing challenges N-ERGISE is pleased to confirm the company's ZERO accident record remains.

Due to the platform sustaining damage from a ship collision a large volume of welding and strengthening work was required prior to the topside being lifted. N-ERGISE is pleased to advise on the high quality of welding with no failures verified via 3<sup>rd</sup> party inspection.

Project services provided included: Engineering, Project Management, Electrical, Rigging, Welding, Scaffolding, NDT and Rope Access.

N-ERGISE has become a market leader within the Decommissioning market with being involved in many successfully projects across the Energy sector from Engineering studies through to asset removal.
